Transportation management with SAP

## Leveraging end-to-end SAP TM capabilities and integration potential

As complexity in transportation networks increases, businesses benefit from optimizing their end-to-end networks and processes. 4flow supports the transformation to SAP Transportation Management (TM), a user-centric transportation management system that enables businesses to pursue their S/4HANA transformation strategies and take advantage of the latest innovations in the app ecosystem.

4flow helps customers implement next-level process automation, connected partner collaboration and real-time visibility – and set sustainability targets.

4flow customers improve cash flow and reduce freight spend with SAP TM solutions, which are integrated into S/4HANA enterprise management.

4flow adds value by digitally transforming your transportation processes
Transformed transportation management

Transformation results

| Freight cost savings

| Economic efficiency | End-to-end visibility

| Business productivity | Process standardization

Transportation management with SAP TM

Benefits for 4flow customers
